# City of Mesquite

Tree Inventory Results
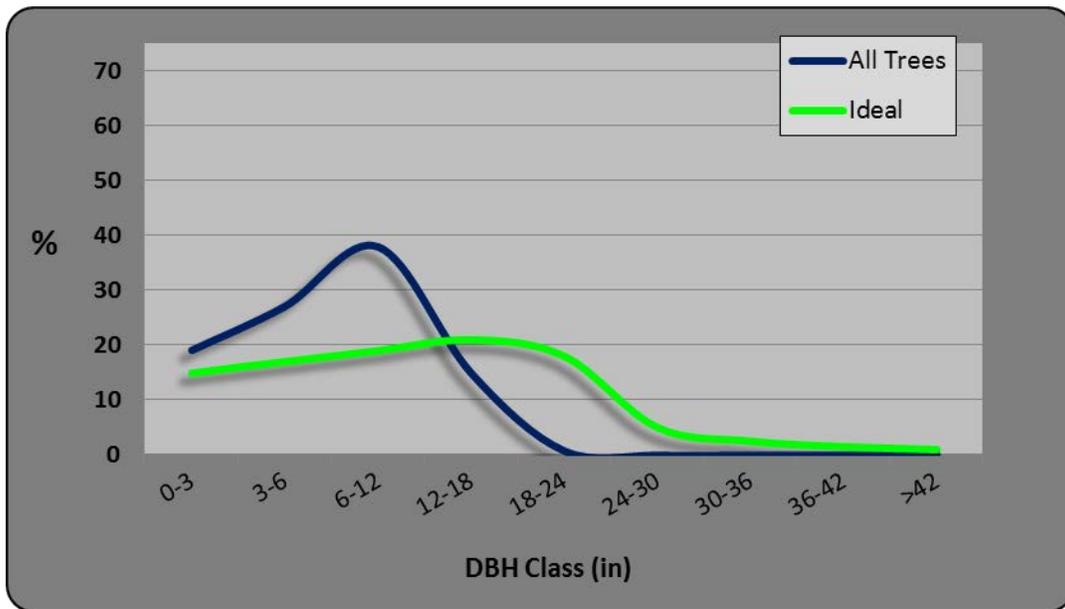

Tree Population – There were 1,779 trees inventoried in Mesquite as part of the Clark County Tree Inventory Project.

Tree Species - There were 46 unique tree species identified in the inventory. The predominant tree species are *Fraxinus velutina* (velvet ash, 18%), and *Washingtonia filifera* (California palm, 10%). The chart below represents the population distribution of the top 10 species in Mesquite's urban forest.

| Species	Percentage
Velvet ash	17.6%
California palm	9.9%
Mexican palm	9.4%
Fan-Tex ash	7.9%
Live oak	7.5%
White mulberry	5.5%
Mondale pine	5.2%
Honey mesquite	4.0%
Raywood ash	3.4%
Queen palm	2.8%
OTHER SPECIES	26.9%

Tree Size and Age Class – The age of the urban forest can by approximated by considering the DBH* range of the overall tree population. In Mesquite, 46% of trees measure between 0 to 6 inches DBH and 84% of the trees are less than 12 inches DBH. In comparison to what is considered an ideal population distribution, Mesquite's urban forest is young overall, with few large trees. It is important to recognize that this younger, smaller, population can be somewhat reflective of the climate and smaller stature of the trees that make up the Mesquite urban forest. The chart below compares the Mesquite population distribution to an ideal distribution.

DBH is diameter of the tree trunk at breast height, measured at 4'6" above the ground

Tree condition - Each inventoried tree was rated for overall condition, including consideration for structure, foliage, and the root collar. When trees are performing at their peak, the benefits they provide are maximized. The inventory found 54% of Mesquite's trees in good condition and 39% in fair condition. Nearly 8% of the population was determined to be in poor condition or dead or dying.
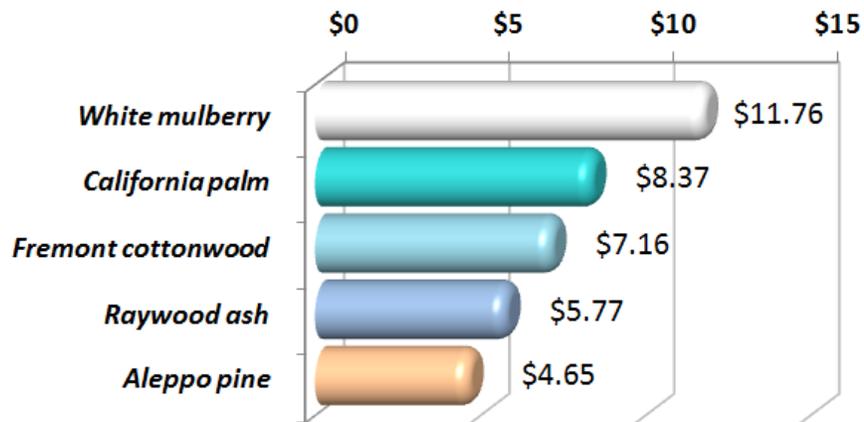

Replacement Value – The community forest is a public asset that, when properly cared for, has the potential to appreciate in value as the trees mature over time. Replacement value reflects the current population numbers, stature, placement and condition. To replace Mesquite's current inventoried tree population of 1,779 trees with trees of similar size, species, and condition would cost nearly **$3.5 million.** The average replacement value per tree is nearly $1,941.
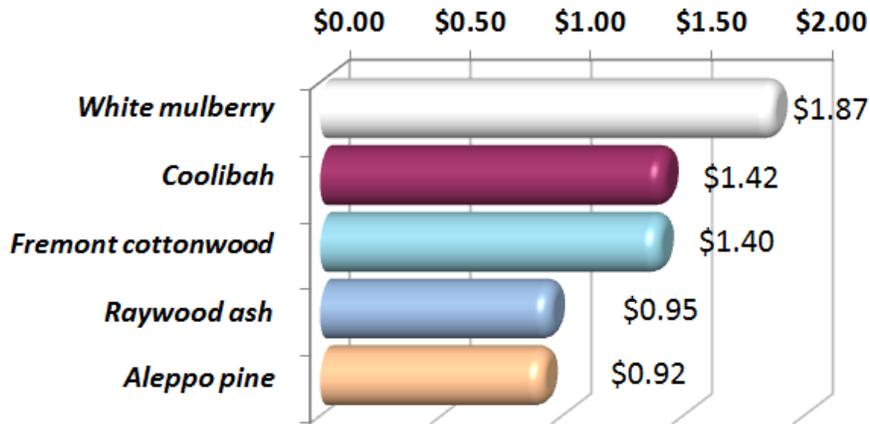

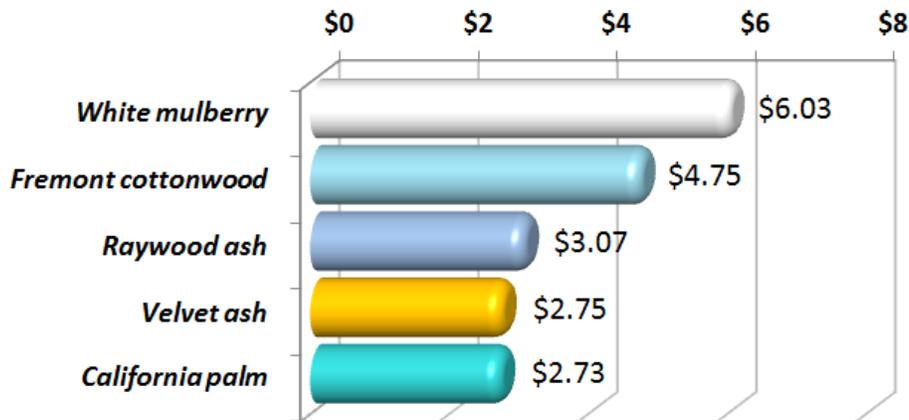

Urban Forest Benefits

Electricity and Natural Gas Reduction - Electricity and natural gas saved annually in Mesquite from both the shading and climate effects of inventoried trees is equal to 104 MWh (valued at $6,950) and 742 therms ($479), for a total retail savings of approximately **$7,429** and an **average of $4.18 per tree**. The chart below shows the top five performing tree species in terms of energy savings on a per tree basis.
	$0	$5	$10	$15
White mulberry				$11.76
California palm		$8.37		
Fremont cottonwood		$7.16		
Raywood ash	$5.77			
Aleppo pine	$4.65			

Sequestered Carbon Dioxide To date, Mesquite's inventoried urban forest has sequestered a total of 319 tons of carbon dioxide (CO_2) valued at $4,794. Annually, this tree resource directly sequesters 34 tons of CO_2, valued at $504, into woody and foliar biomass. When CO_2 emissions from tree decomposition and tree related maintenance activity along with the positive benefits of avoided CO_2 through a reduction in energy needs are considered, Mesquite's trees provide an annual net reduction in atmospheric CO_2 of **82 tons, valued at $1,235**, with an average of **$0.69** per tree. The chart below shows the top five performing tree species in terms of CO_2 reduction on a per tree basis.

|	$0.00	$0.50	$1.00	$1.50	$2.00
White mulberry					$1.87
Coolibah				$1.42	
Fremont cottonwood				$1.40	
Raywood ash			$0.95		
Aleppo pine			$0.92		

Net Air Quality Improvement - The net value of air pollutants removed, avoided, and released by Mesquite's inventoried public tree population is $3,022 annually. The average net benefit per tree is $1.70. The chart below shows the top five performing tree species in terms of net air quality improvements on a per tree basis.

	$0	$2	$4	$6	$8
White mulberry				$6.03	
Fremont cottonwood			$4.75		
Raywood ash		$3.07			
Velvet ash		$2.75			
California palm		$2.73			

Storm Water Runoff Reductions – Mesquite's inventoried trees 466,676 gallons of storm water annually for an average of 262 gallons per tree (Table 10). The value of this benefit to the City is $2,240, an average of $1.26 per tree. The chart below shows the top five performing tree species in terms of storm water benefits on a per tree basis.

	$0	$2	$4	$6
Fremont cottonwood			$3.35	
White mulberry			$3.27	
Aleppo pine			$2.86	
Coolibah		$2.36		
Raywood ash		$2.21		

Aesthetic, Property Value, and Socioeconomic Benefits - The total annual benefit associated with property value increases and socioeconomic benefits is $54,655, an average of $30.72 per tree. The chart below shows the top five performing tree species in terms of aesthetic and property value and socioeconomic benefits on a per tree basis.

Species	Value
Fremont cottonwood	$86.36
Coolibah	$85.28
Aleppo pine	$74.88
Raywood ash	$60.38
Honey mesquite	$50.47

Benefit Summary – The total estimated benefits provided by Mesquite's inventoried tree resource is $68,581, a value of $38.55 per tree and $4.49 per capita. These benefits are realized on an annual basis as follows:

- Electricity and Natural Gas Reduction - $4.18 per tree
- Sequestered Carbon Dioxide - $0.69 per tree
- Net Air Quality Improvements - $1.70 per tree
- Storm Water Runoff Reduction - $1.26 per tree
- Aesthetic, Property Value, and Socioeconomic Benefits - $30.72 per tree
- Total Benefits - $38.55 per tree

When the per tree values are calculated across the urban forest, Mesquite receives the following in total annual benefits.

	$70,000
	$60,000
	$50,000
	$40,000
	$30,000
	$20,000
	$10,000
