

Nevada Shared Stewardship

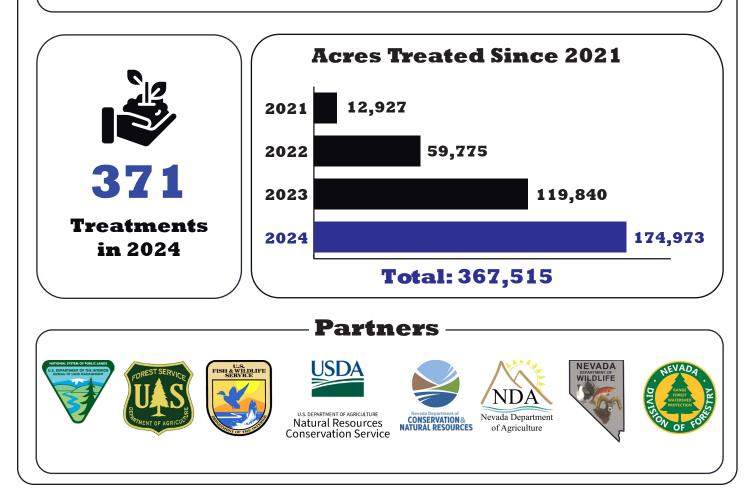

2024 Annual Report

The Nevada Shared Stewardship Agreement commits federal and state agencies to protecting communities, livelihoods, and ecosystem health by:

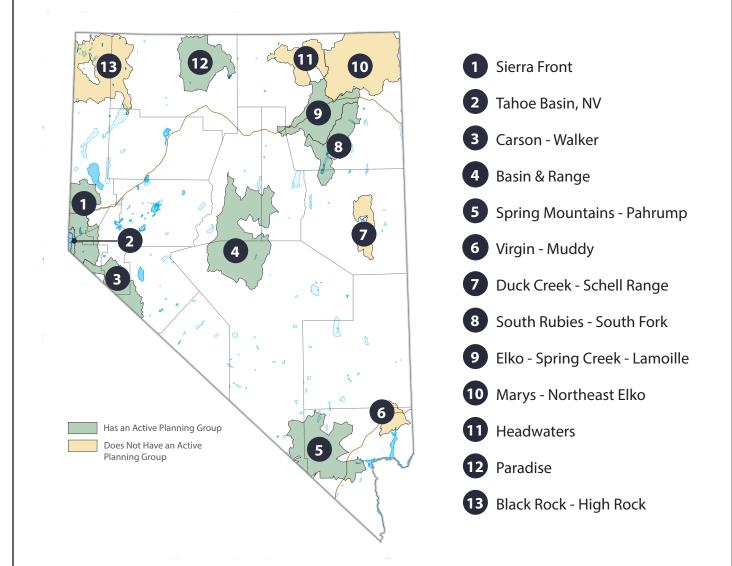

- Increasing the pace and scale of restoration work in priority landscapes.
- Maintaining past treatments so they remain effective.
- Employing state, federal, and other partners to achieve collaborative ecosystem restoration and wildfire risk reduction throughout the state.

Agencies will collaboratively:

- Determine management needs and priorities statewide.
- Do the right work in the right places, at the right scale.
- Use all available tools and resources for active management.

Priority Landscapes

Treatments by Landscape, 2024

Landscape	Treatments	Acres	Landscape	Treatments	Acres
Sierra Front	72	9,762	South Rubies - South Fork	21	26,932
Tahoe Basin, NV	27	879	Elko - Spring Creek - Lamoille	59	4,811
Carson - Walker	5	1,316	Marys - Northeast Elko	4	11,431
Basin & Range	18	38,319	Headwaters	3	387
Spring Mtns - Pahrump	60	18,732	Paradise	36	43,011
Virgin - Muddy	14	1,434	Black Rock - High Rock	8	9,431
Duck Creek - Schell Range	44	8,528	Totals	371	174,973

Milestones in 2024

The Shared Stewardship partnership achieved major milestones in 2024, including establishing a Tahoe Basin Landscape Planning Group and renewing the Shared Stewardship Agreement for another five years.

The partnership continued work on priority landscapes, developing or maintaining five-year work plans for eight of the thirteen designated landscapes.

Multi-agency planning groups, composed of agency staff and other stakeholders, treated about 174,973 acres across more than 371 high-risk areas—an increase of nearly 32% from the previous year. This continues the steady growth in treated acreage since 2021.

Landscape planning groups carried out projects that restore natural ecosystems and habitats, reduce the risk of severe wildfires, and protect critical infrastructure such as homes, public buildings, utilities, roads, and watersheds. Shared Stewardship partners also established the Science Subcommittee and hosted two webinars and one field day to help agency staff understand and apply the best available science. The subcommittee supports the expansion of outreach and education efforts.

Partner agencies highlighted successes and the need for state funding for priority work in front of the Legislature's Joint Interim Committee on Natural Resources, resulting in a recommendation to the Governor to provide funding in the executive budget. A \$6 million allocation now awaits legislative approval.

Applied Treatments Acreages, 2021-2024

Treatment type		2022	2023	2024
Prescribed Burning/Broadcast Burning/Pile Burning		120	333	28,884
Fuel Breaks/Green Stripping/Biomass Removal		7,583	25,708	16,405
Seeding/Planting		19,666	1,202	32,749
Targeted Grazing		8,205	9,264	7,895
Thinning/Pile Building/Chipping		6,926	23,538	36,963
Weed Control and Management/Invasive Species Eradication		17,015	58,949	51,317
Brush Management		0	528	1
Critical Infrastructure		253	250	1
Compacting/Crushing of Fuels		0	0	756
Riparian Restoration		7	7	2.5
Total	12,927	59,775	119,840	174,973

Shared Stewardship in Nevada

Nevada has a long history of partnerships that address wildland fires, landscape restoration, and the wildland urban interface. In 2019, the State of Nevada and federal agencies signed the initial Shared Stewardship Agreement to guide collaborative work for a five-year period ending in 2024. In November 2024, Governor Joe Lombardo and federal partners renewed the agreement for an additional five years. The updated agreement recognizes progress to date, setting forth goals along three major themes: 1) wildfire risk reduction, 2) science and data-driven planning and collaboration, and 3) conservation, funding, and sustainable stewardship.

Wildfire Risk Reduction and Landscape Resilience

- Increase treated acres for wildfire risk mitigation and ecosystem restoration by 50% by 2029.
- Evaluate high human-caused wildfire occurrence areas and develop mitigation, prevention, and fuels management strategies.

Science and Data-Driven Planning and Collaboration

- Use science and data to reassess priority landscapes and designate new areas for treatment.
- Identify additional outcome-based metrics to track shared stewardship's success.
- Establish and maintain landscape planning groups and five-year programs of work for all priority landscapes.
- Update or create Community Wildfire Protection Plans (CWPP) for all at-risk communities by 2029.
- Update the Nevada Cohesive Strategy/Shared Stewardship Strategic Plan by 2027 using designated collaborative groups (Nevada Shared Stewardship, Fire Adapted Nevada, and Nevada Fire Board) and produce annual accomplishment reports.
- Develop and implement a strategy to institutionalize shared stewardship as the working model for agency collaboration.
- Continue phased development of priority landscape planning groups.

Conservation, Funding, and Sustainable Stewardship

- Explore Threat-Based Strategic Conservation approaches to protect, grow, and connect core habitats.
- Research collaborative funding models and identify funding sources that could support development and operation of shared stewardship projects in Nevada.
